Other companies offer VMI. Fast-Rite provides a turnkey component management service.

Fast-Rite's Genius Component Management programs can typically realize savings of more than 20%, with additional hard costs savings.

We help you optimize the way you run your business, consolidate inventory and eliminate supply chain material and labor handling redundancies – increasing your profits and lowering your overhead.

And our real-time, lean distribution-based inventory management technology ensures accuracy and timeliness. Increase control and visibility of your inventory. Reduce warehouse costs. Save money. It's lean distribution at its best.

Multiple Genius Component Management options customized to fit your requirements

- ↓ **Customer E-portal.** For those who prefer a self-managed solution.
- ↓ **Total VMI.** We deliver direct to your factory floor, line, cell or point-of-use.
- ↓ **Site management/man-in-plant.** With our high-volume Genius programs we can establish a dedicated in-plant presence with specially trained personnel to perform customer data collection, organization, delivery, put-away and MRP processing so you can minimize transactional and labor load.

MRP data reviews and forecast analysis

Purchase order minimization and auto-processing

Inventory level monitoring and restocking

Automatic, consolidated invoicing

Goods pre-receiving

JIT delivery and replenishment to production line or work cell

Box break down and empties recycling

↓ Need secured storage for high cost items? Ask up about our Fast-Vend Options.

MANAGEMENT SERVICE.”

MANAGEMENT

9 Big Benefits of Component Management

Our component management services help you optimize the way you run your business, consolidate inventory and eliminate supply chain material and labor handling redundancies – increasing your profits and lowering your overhead.

1 Minimize inventory footprint

2 Maximize production space

3 Eliminate need for safety stock

4 Manage waste

9 BIG BENEFITS

“OUR REAL-TIME, LEAN DISTRIBUTION-BASED INVENTORY MANAGEMENT TECHNOLOGY ENSURES ACCURACY AND TIMELINESS.”

6

Reduce administration, inventory and expediting soft costs

7

Ensure stock arrives at point of use when you need it

5

Eliminate MRP

8

Consolidate purchasing & billing

9

Reduce waste

A woman is operating a forklift in a warehouse aisle. The forklift is carrying a pallet of boxes wrapped in clear plastic and secured with green straps. The aisle is narrow, with a corrugated metal wall on the left and a concrete floor. The lighting is bright, coming from the end of the aisle.

Our VMI programs deliver hard savings and impact the bottom line

CASE STUDY

Hard Goods Manufacturer

Fast-Rite implemented a sophisticated, multi-staged VMI program to manage multiple points of use, hundreds of SKUs and dozens of packing sizes and methods.

Our Site Managers are stationed in the customer facility, performing VMI tasks, MRP analysis and order functions.

They provide data collection scanning services, replenish tote locations and direct material handlers for powered functions. Deliveries are made daily or more often if needed. They also serve as a front-line interface with the line and cell personnel to streamline the supply chain and provide an instant response to any inventory supply challenges. This reduces customer staffing requirements.

“FAST-RITE
IMPLEMENTED A
SOPHISTICATED,
MULTI-PRONGED
VMI PROGRAM”

CASE STUDY

Security Equipment Provider

A leading security equipment provider uses vending machines to control expensive MRO supplies. Extensive documentation is provided of user transactions including item, quantity, date and time used, and applicable user number.

Fast-Rite monitors real-time transaction data and reships when a minimum trigger point.

Access is by authorized personnel only and can be limited or restricted by quantity, item or number of transactions within a specified time period or login.

Data capture can be via swipe card, RFID, Key code or other methods. Data lockers can be added for larger items. Customers can access current inventory status usage.

CASE STUDY

Major Lighting Manufacturer

This client uses our VMI program for their entire inventory. Fast-Rite employees capture and electronically transmit order data back to our plant where restock material is immediately packed, loaded into trucks and readied for the next shift delivery.

This lean system allows for greatly reduced on-site safety stock — only 4 hours of material. Inventory footprint has been virtually eliminated and raw material is able to be strategically placed either at, or near, the POU.

Electronically monitor and replenish with our FAST-VEND virtual inventory systems

Electronically monitor and automatically
trigger inventory replenishment.

Advanced digital bin systems
automatically detect when your
parts hit pre-set replenishment
triggers and request the next
refill. No need to walk in to
scan the rack!

These devices include bin scales
and automatic data feed bins.

Our calibrated weight-activated
bins will calculate bin quantities

FAST-VEND

“ELIMINATE THE
NEED FOR PURCHASE
ORDERS AND SAVE
TIME, FREEING UP
RESOURCES FOR
OTHER WORK.”

either by an exact item count or a trigger point. The former allows an understanding of usage per day and can even track individual user usage.

Did third shift consume everything in bin C5? We'll know, and can react RITE away. Eliminate the need for purchase orders and save time, freeing

up resources for other work. That's OEM Optimization!

Genius supply program vending solutions for your MRO Supply

Our state of the art vending machines and lockers are the easiest way to gain complete control of your MRO supplies.

They put MRO supplies where your employees work, saving you walking wages. They've been proven to reliably reduce parts consumption by 20% or more! Authorize users with 24-7 access to the items they need and retain complete audit trails for analysis. Plus we see real time inventory levels, allowing for immediate replenishment when needed.

Manufactured to industry-leading specifications

Every Fast-Rite component is manufactured to meet or exceed the most stringent international standards.
